

Arpac Storage Solutions Selects Equip-Soft

Forklift dealer and storage product manufacturer invests in Microsoft software solution to integrate information across diverse business- Arpac. IndustryBuilt is pleased to announce that Arpac has chosen to implement EquipSoft for both their dealer and manufacturing operations.

“Our current dealer management system (Minitrac) and manufacturing system have not kept pace with our growth. We needed a system that could fully support all areas of our business and eliminate redundancies and manual processes. Equip-Soft not only exceeds what we’re looking for, but is also the business system other industry leaders are moving forward with.” says Art Wuschke, President of Arpac.

Equip-Soft is a software solution designed for the Equipment Dealer industry, based on the Microsoft Dynamics NAV platform. This industry specific software will allow Arpac to efficiently run the dealer side of their business and also their manufacturing business.

“Arpac wanted to align with a leading edge software company that had strong vendor support. Built on an incredible platform like Microsoft Dynamics, Equip-Soft assures dealers that they will have product enhancement and support for as long as they need it. Most dealers don’t have a manufacturing business, but our software is so flexible it is capable of managing all elements of any dealer’s business” states Russell Durrant, VP Equip-Soft.

About Arpac Storage Solutions

Arpac’s three divisions Storage Products, Lift Truck and Dock Equipment market a broad range of material handling equipment in Western Canada and the North Western US. Specialization by product range enables their employees to maintain focus while offering fully integrated material handling solutions for commercial, industrial, and institutional clients. In addition to their head office and storage products manufacturing plant in Delta, they maintain Sales and Service facilities in Calgary and Edmonton, Alberta and Delta and Langley, British Columbia.
